CAREER DEVELOPMENT

Solaris Pty Ltd
Senior Software Developer   *March 2022 – present*

Along with a small team of other senior software developers, my main role is to implement new features to a solar CRM called Solarplus.

Accomplishments include:
- Deep dive on the Mapbox API
- Worked on production environment using Google Cloud Platform
- Significantly improved performance for several VueJS pages and components

CoBabble UK Ltd.
Lead Developer   *April 2019 – present*

Involved in the planning, developing, and maintaining the CoBabble web application and REST APIs for the iOS and Android app.

Accomplishments include:
- Switched production environment to serverless architecture using Laravel Lambda,
- AWS production environment using EC2, SES, S3, and RDS
- Developed and maintained the web application and the REST APIs for the mobile application
- CI/CD with Github Actions and AWS CodeDeploy

Cody Web Development Inc. (formerly LIG Inc.)
Backend Engineer (PHP)   *November 2019 – April 2022*

Main role is to develop APIs to be utilized by frontend engineers and iOS/Android developers. Laravel is the main framework used in developing most of the project's API endpoints.

Accomplishments include:
- Setup production environment using AWS EC2, Load Balancers, S3, RDS, SES, and Route53
- Improved test driven development
- Improved CI/CD
- Developed a web scraping script using Python
- Developed a service that will scan a business card and extract and categorize entities like name, telephone number, etc. using Google Vision and Google Natural Language

StewArt Media
Web Developer   *June 2016 – November 2019*

Responsible for implementing website changes for different websites from different clients to improve their SEO. Websites include but are not limited to Wordpress, Joomla, OpenCart, Magento and BigCommerce.

Internetly Ventures Inc.
Web Developer   *January 2015 – May 2016*

Lead backend developer assigned to write, maintain, and test codes using Laravel Framework.

Accomplishments include:
- Re-wrote an existing web application using a lower version of Laravel (4.x) to run with the latest version of Laravel

- Developed an entire application module (Invoice creation and update) using KnockoutJS framework
- Migrated an existing web application from a shared hosting service to a cloud server

M-S-S ASIA LTD.
Web Developer   *March 2014 – January 2015*

Developed bespoke web applications using Laravel Framework for several companies ranging from law firms, hotels/resorts, and construction companies.

Accomplishments include:
- Developed a program module that automates syncing of data between two different database systems (MSSQL and MySQL)
- Developed a program module that listens to a specific mailbox and parses email by certain criteria and process them to be used in the web application

THE TMSWAY LTD.
Web Developer   *August 2012 – March 2014*

In-house web developer assigned to develop web applications using a PHP framework called Codeigniter.

Accomplishments include:
- Designed a MySQL database structure from scratch and able to utilize Stored Procedures for flexibility on different platforms (Android, iOS, Java)
- Assisted in developing a version control tool for MySQL database
- Assisted on creating a web documentation tool for other web developers that retrieves database stored procedure information directly from the database table

Survey Sampling International, Phils. (formerly Opinionology Phils.)
Project Lead   *May 2012 – July 2012*

Main point person and managed a small group of survey programmers assigned to a UK client.
- Collaborated with account managers and client
- Delivered reports to our Department head
- Managed programmers and responsible in disseminating projects and tasks across the team

Accomplishments include:
- Created a custom web based reporting tool for our UK client to view daily statistics of running web surveys
- Customized existing emailer tool to cater client's request
- Optimized web surveys that runs every month to be more flexible and able to handle complex changes from the client

Survey Programmer   *April 2010 – April 2012*

Developed online surveys for various clients using PHP and other web technologies like Javascript, Flash, etc.

Project Contractor *May 2009 – November 2009*

Migrated Lotus Notes database to Enterprise version of Google Mail by manually converting each archived email from Lotus Notes and attaching/uploading it to Google Mail.

PROJECTS

Solarplus (go.solarplus.co)

A versatile solar design software that caters to a wide range of users, from small residential installers to commercial engineers and large retail teams. It offers powerful tools for sales, energy and financial modeling, customer management, and proposal generation, all aimed at facilitating unlimited business growth.

Scope of Work:	Implementation of new features, Bug fixes, Maintenance
Web technologies include:	Yii, Nuxt, GraphQL, MySQL

CoBabble (cobabble.com)

A simple but powerful knowledge transfer platform for businesses and individuals. Some of its features are real time content delivery, video centric contents, analytics, and a user-friendly mobile app.

Scope of Work:	Planning to Deployment, Maintenance
Web technologies include:	Laravel, VueJS, MySQL, React Native

Meishideseikyu

An app developed to merge contacts from different sources (Google, iPhone, and other apps). This also enables customers to send invoices within a few clicks to clients in Japan in the Japanese template. Other features including Job search, job related media are also available within the app.
